

Scope CL barley update

Malting and Brewing accreditation = EPR rate change

In March 2013 Barley Australia announced that Scope CL has been accredited as a malting and brewing variety.

In accordance with this development (and as stated on the Scope CL barley Factsheet and the Seednet website since the variety was released in 2011), the End Point Royalty for Scope CL barley will be increasing from \$2.70 +GST per tonne to \$3.50 +GST per tonne.

This change will take effect for the 2014 season harvest.

Please note that correct variety declaration is critical to the integrity of Australia's malt barley industry.

Yours sincerely

Simon Crane
Manager Seednet
