Declare.
from 1 December

Harvest Declaration submission
now simpler, faster.

Done.
by 31 March

Submit your Harvest Declaration even earlier, simpler, faster.

The 2026-27 Harvest Declaration process is opening even earlier this year, still simple to do and quick!

Building on the success of the simplified Harvest Declaration process, we are opening submissions earlier this year - meaning you can Declare from 1 December 2026.

Growers only need to provide:

- tonnes **unsold from the 2025 season** (by variety)
- tonnes **harvested in the 2026 season** (by variety)
- tonnes **retained in 2026 for seed** (by variety)

You don't need to submit data related to sales or grain used on farm for stockfeed, saving time and effort.

It means you can do your part of the paperwork immediately after harvest, while it's fresh. Then, once you've fully executed all sales, it's easy to confirm with the relevant Royalty Manager that you're ready to reconcile.

Record your results as you harvest, ready to submit at the start of December.

It is still important to accurately record tonnages by variety across your operations, so that Breeding Companies / Royalty Managers can reconcile your account.

Use our simple template during harvest, available on the Variety Central website, to record the information you'll need when Declarations open.

Streamlined, simplified process

In response to grower and industry feedback that parts of the current process were too complex a new, simpler solution was implemented last year.

Our Members determined the minimum information they require to reconcile EPR payments, resulting in a significantly simplified process.

In partnership with the National Grower Register (NGR) the myNGR online portal was refined, to further improve the Harvest Declaration experience.

Participating Breeders

Six of Australia's largest cereal crop breeders are participating in the launch of the simplified HD process, representing 98% of the national winter crop.

For declaring other varieties, please visit the relevant breeder's website for details. Links to all ACB Member websites can be accessed from the Variety Central website home page.

Accessing the HD system

Using the streamlined system is simple, with full guidance and support available when you first login to the myNGR portal.

Clear navigation and explanations are provided throughout the process.

Several 'How to' videos are available at the Variety Central website, as well as detailed prompts for each part of the submission form.

You can also contact the relevant Royalty Manager for a variety you're submitting to ask for assistance. Their details can be found at: varietycentral.com.au/royalty-managers.

The simplified Harvest Declaration process is:

Faster

Complete your HD immediately after harvest – no need to wait for or chase up sales records.

Simpler

Less paperwork with fewer details to gather and enter. Declare your harvest in just a few clicks.

Earlier

Get it done now, before you need to concentrate on next season's sowing.

Smoother

Refined online experience on the myNGR platform.

Easier

Focus on keeping good tonnes-by-variety records as you harvest for production accuracy, which underpins reconciliation and correct EPR invoicing.

If you have questions

This is the best way for growers to provide their Harvest Declaration to six of Australia's largest crop breeders. We are here to help if you have any questions as you go to prepare for and submit your HD.

Detailed information is available on the Variety Central website, including an overview of what documentation you need, frequently asked questions and explanations, 'How to' videos and additional information.

Visit varietycentral.com.au or australiancropbreeders.com.au to find out more.

Remember, if you have produced grain this year, you must Declare.

Before you start make sure you have the following details **for each variety** you've grown:

Last season:

- Remaining 2025 unsold grain tonnes

This season:

- Total 2026 season tonnes harvested
- Tonnes retained for seed

Remember, we need these amounts by variety.
